

HOW TO IMPRINT IN VIRGIN GRAINS/SUGAR PILLULES, LONG LASTING, THERAPEUTIC SPECIFIC-QUANTIC BIOPHYSIC INFORMATIONS.

Among the Bicom therapists, and as well in general terms, among the bioresonance therapy practitioners, it is believed that the drops that are informed by oscillations frequencies, memorized in water or hydroalcohol drops by bioresonance devices, remain active and effective just few weeks. In other words, the informations coherence waves (“informed oscillations inside a coherence molecular dominions structure”, according Eng. Del Giudice and Eng. Preparata theory), stored in the water or hydroalcohol, are saved - as effective memorized information - just short time. But during this period, it is believed, these fixed waves are effective as the original - for example - homoeopathic remedies that they are the copies.

To overpass the problem of the short time lasting of the memorization of the bioresonance drops, it is possible to use a method, as following described. It is important to outline that there is not sure, scientific proof about what it is herewith showed. Just experience. And for the same way, that is by direct experience, you as well - dear colleague in bioresonance therapy – may proof this opportunity. Please note however, that this system is an ancient method of medicating homoeopathic grains, used for 200 years from Samuel Hahnemann (1755-1843) time since now, all over the world.

The logic in the method, is that we have to fix the frequencies just memorized in the hydroalcohol or water, soon since that they are “fresh and alive”. How we do it? Simply, medicating virgin sugar grains/pillules by these medicated drops soon as we have imprinted them. In this way, the grains will store the memorized frequencies for a very much more longer time; according our observations, at least two years.

How to make them.

1. You have to use some glass little ampoules, with plastic cup. In the photo aside, you see such ampoules¹, that we have previously filled with some drops of organic edible alcohol at 90°volume degrees. The 10° volume degrees remaining of the hydroalcohol mixture, is of spring natural water. How many drops to fill the ampoules? About 2 drops every 5 ml of amber ampoules containing the grains to be medicated.

Just so few drops, you may ask?

Yes. Because, we have to remember, that we are not working with active principles of herbs or whatsoever; we are working with almost imponderable information waves. We are not in biochemical world, we are moving in a biophysical quantic world.

2. This virgin drops has to be memorized using the selected frequencies: homoeopathic, nosodes, extracts from herbs, foods, bodily fluids, or others. The method of transferring the

frequencies from the physic vial or substances (homoeopathic or others) to the memorized vial (resulting in just imponderable frequencies) it is not discussed here.

We use the BICOM method; you may have the same device or another one. You may use a bioresonance device, or a radionic or even another. Here we are only showing the method to save as long as possible such copied quantic informations from a fluid mean, to the grains. Please note also that here we are not discussing the effectiveness of the method to imprint the hydroalcoholic drops to be used for the unmedicated grains, this is under your choose and responsibility.

3. At this point you should have prepared separately, an amber glass ampoule, filled with virgin sugar grains². The ingredients of the pilloules, generally sucrose, or xylitol (a sugar derived from corn) or lactose, are those more used. The dimensions in diameter of the grains, are of several type, generally from 1 millimeter to 5 mm. In the photo you see sugar grains of 3 millimeter of diameter; one amber glass ampoule of ml 15/14 grams, filled with about 12 grams of grains: in the photo, showing one ampoules with not less than 340 grains inside. If the dosage daily is 3 grains three times, they are 9 grains a day; that are more than one month of therapy per ampoule filled. The raw value of one filled amber ampoules, cost at the end, to the practitioner approximately one and half euro each.

4. At this point, you simply put the medicated alcohol drops of the transparent little ampoule, inside the amber ampoule with the virgin grains. Screw the plastic cup. Shake - but slowly - the amber ampoule several times. The wet of the medicated hydroalcohol and his "etheric vapour" medicate all the inside grains. You will note, on the amber glass inside surface, a wet-micro-drop forming. Well. Medication of the grains correctly happened. In few days, the alcohol will be absorbed and will vapourize as well when the ampoule will be opened. But the grains remains informed. That means that selected informations waves fixed there, are stored inside. For many months.

(1): The white transparent glass little ampule is from Regumed
